Dear Editors,

Castilho-Torres et al., from Mexico, wrote a very interesting letter entitled “Another one that extends the toe: the Austregésilo-Esposel sign”<sup>1</sup>. The authors make complimentary comments on the manuscript recently published by Novis et al.<sup>2</sup> and present a case report of an 89-year-old patient with

ischemic stroke, who presents the Babinski sign, and also its substitutes, the Chaddock, Oppenheimer and Austregésilo-Esposel signs, documented by figures and video<sup>1</sup>. We greatly appreciate the authors’ contributions and congratulate them on the excellent description of the Austregésilo-Esposel sign.
