

Dear all,

Horticultura Brasileira, volume 35, issue 3 is ready! Our cover brings the picture of an experiment with tomatoes in protected cultivation to illustrate the cover article, from Dr. Alessandro Lúcio and Bruno Sari (Crop Science Department, the Federal University of Santa Maria), which comprehensively deals with experimental principles, techniques and methods, focusing on the specificities of vegetable crops. Do not miss it! And go beyond: come back to the paper whenever you are planning or implementing your experiment or when carrying out data analysis. It is a highly valuable tool to make your experiments even better! Use and enjoy it!

See you in our next issue,

Paulo Melo, editor in chief
