

Editorial

This is the CEFAC Journal supplement prepared with the guidance of the Scielo team to decrease the time delay in the publication of scientific articles and diffusion of scientific knowledge in the field of Speech Language Pathology. The supplement including 15 original articles, 1 literature review, and 2 case reports in the fields of audiology, language, and orofacial motricity.

As for the original articles, **Costa, Albiero and Mota** present the first contribution on the *Aspects of speech fluency in children with and without evolutive phonological disorder*. The second contribution is from **Giacchini, Mota and Mezzomo** on *The details in the therapeutic process to the consonant clusters acquisition in the speech of children with phonological disorder*. **Mezzomo, Vargas and Dias** wrote the third contribution on the *Strategies used by children with typical and atypical phonological development during the blocked syllable acquisition*. The fourth contribution is from **Backes, Pegoraro, Costa and Mota** on *Characterization of uncommon repair strategies used by a group of children with phonological disorders*.

Barberena, Mota and Keske-Soares have the fifth contribution on the *Phonological changes obtained by treatment based on ABAB-withdrawal and multiple-probes approach in different severity levels of phonological disorders*. *Initial lexical acquisition and noun bias hypothesis verification* is the sixth contribution written by **Nóro, Silva, Wiethan and Mota**. **Mezzomo, Lopes, Abelin and Oppitz** present the seventh contribution *Acquisition of cv syllable in the typical and impaired phonological development*. The *Comparison between the classification based on features and percentage of correct consonants in speech disorders* is the eighth contribution by **Giacchini and Mota**.

The study entitled *The production of the complex onset: acquisition guided by the syllable or segment?* is the ninth contribution from the authors **Lopes, Dias and Mezzomo**. **Griz, Curado, Silveira, Barbosa, Silva and Meneses** present the tenth contribution entitled *Socioeconomic and demographic aspects of families enrolled in a newborn screening program during its first three years*. The eleventh contribution **Rocha, Rezende, Lima, Borges, Oliveira and Santos** on *Biosecurity precautions adopted by professionals working in audiology*. The twelfth contribution **Ritzel, Berwig, Silva, Mezzomo, Côrrea and Serpa** discuss the *Usual tongue and lips position in anteroposterior and vertical growth patterns*.

The literature review article is the twenty-sixth contribution is thirteenth contribution from **Wiethan, Ceron, Marchetti, Giacchini and Mota** entitled *The use of electroglottography, electromyography, spectrography and ultrasound in speech research – theoretical review*.

Wiethan and Mota present the study case entitled *The influence of the choice of target sounds and therapy model in children who present devoicing as fourteenth contribution*. The fifteenth and final contribution is authored by **Melo, Mota, Mezzomo and Brasil** on *Production and discrimination of voicing contrast of stops in cases of phonological disorder*.

I conclude this editorial thanking the authors and the reviewers to the mission of transforming the CEFAC Journal in a quality journal in the Speech Language Pathology field at national and international scope!

Profa. Dra. Simone Aparecida Capellini
